

# Mathematics Textbook Analysis; Supporting the implementation of a new Mathematics Curriculum

Lisa O'Keeffe  
University of Bedfordshire

July 29<sup>th</sup> 2014

# Introduction

## Mathematics Textbooks

- have a major influence on classroom practice (Valverde et al., 2002).
- is one of the key factors in implementing mathematics curricula.  
( Schmidt et al., 1997)
- organised in a purposeful way, and consequently their content and structure are important for the promotion of a specific vision of mathematics curriculum, which in turn impact directly on students' learning (Robitaille & Travers, 1992).
- TIMSS (2005) conceives and develops a powerful link between curriculum and textbooks, suggesting the textbook can be considered as a 'surrogate curriculum'.

# Irish Context

- Historically influenced by commercially produced school textbooks
  - a view of mathematics concerned mainly with skills and instrumental learning
  - over reliance on mathematics textbooks
  - contributor factor to the low uptake of higher level mathematics in state examinations

(NCCA, 2005).

- discontinuity between the senior primary school curriculum and the lower secondary school textbooks.

(Cosgrove, Oldham, & Close, 2005)

- Which is affecting the students' transition from primary to secondary education.

(Smyth, McCoy, & Darmody, 2004)

# Irish Context

- **Irish Junior Cycle Mathematics Curriculum**
- The 2005 NCCA curriculum review and consultation discussion paper
  - create and implement a new second level mathematics curriculum - *Project Maths*
  - piloted in twenty four schools in Ireland during the period 2008-2010.
  - implemented nationally in September 2010.
- Project Maths is a five strand curriculum;
  - Statistics and Probability,
  - Geometry and Trigonometry,
  - Number,
  - Algebra
  - Functions

# Irish Context

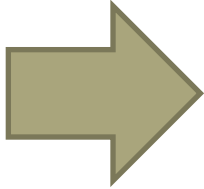

- cooperating teachers were required to evaluate the resource materials and provide feedback,
    - No new mathematics textbooks were introduced by the Project Maths team with the new curriculum.
  - However, as each strand was rolled out into schools nationwide some textbook materials emerged,
    - supplement material to be used in conjunction with previous textbooks
  - The Project Maths development team urged teachers to be flexible in their approach to selecting and using textbooks highlighting that
    - '*no single textbook*' can meet the needs
    - somewhat limited by the 'linear presentation of ideas'
- (Project Maths b).

# Background to the Study

- **Background to the report**
- NCCA commissioned the National Centre for Excellence in Mathematics and Science Teaching and Learning (NCE-MSTL) to conduct a review of school mathematics textbooks published commercially for Project Maths.
- The report (O’Keeffe & O’Donoghue, 2011) was published in 2011 at a time when a significant number of new textbooks were made available for Project Maths
- The intention of the report was to offer an objective evaluation of a selection of new textbooks available for Project Maths.

# Theoretical Framework

## TIMSS

- ▶ TIMSS focuses on curriculum as a means of comparing education systems.
  - ▶ TIMSS model of curriculum:
    - ▶ Intended curriculum
    - ▶ Implemented curriculum
    - ▶ Attained curriculum
  - ▶ Curriculum framework:
    - ▶ Subject matter content
    - ▶ Performance expectations
    - ▶ Perspectives
- 
- ▶ Structure
  - ▶ Expectation
  - ▶ Perspectives

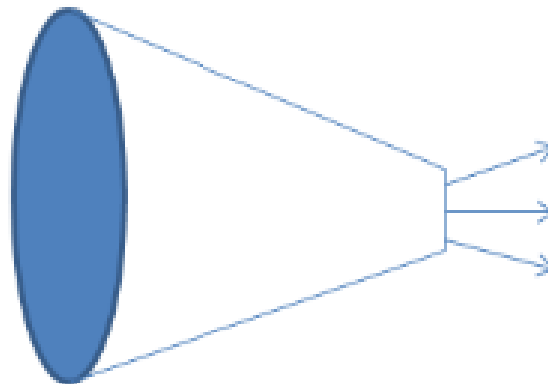

# Methodology

## Theoretical Framework

# Specially Constructed Curricula (SCC)

## Subcategories of PM

- ▶ 6 SCC
  - ▶ Junior Cycle Curricula
    - ▶ Common Introductory Course (CIC)
    - ▶ Strands 1–5 O
    - ▶ Strands 1&2 O
  - ▶ Senior Cycle Curricula
    - ▶ Strands 1&2 O
    - ▶ Strands 1&2 H
    - ▶ Strand 2 H
- ▶ 10 Textbooks
  - ▶ 14 disaggregated “textbooks”

# Methodology

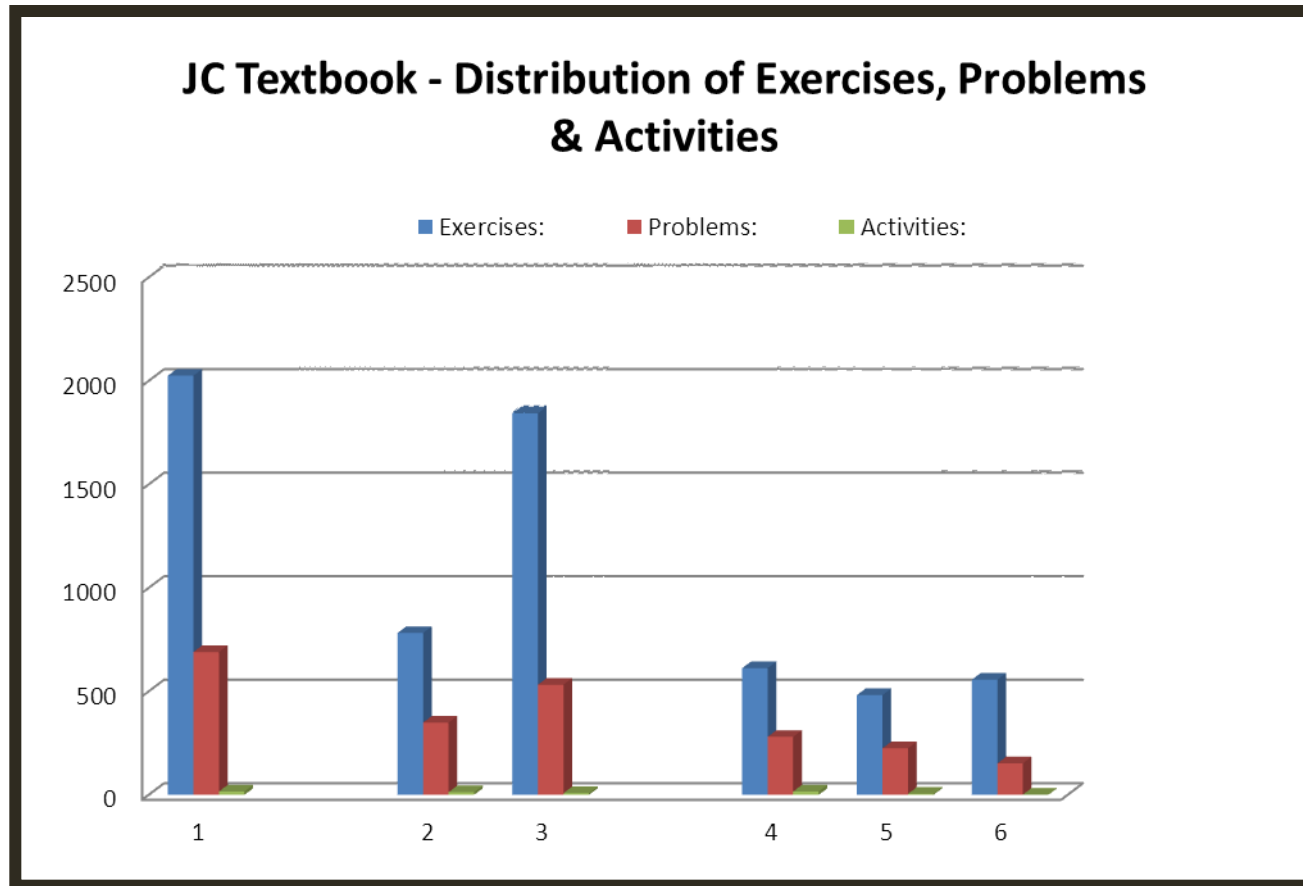

## Overview

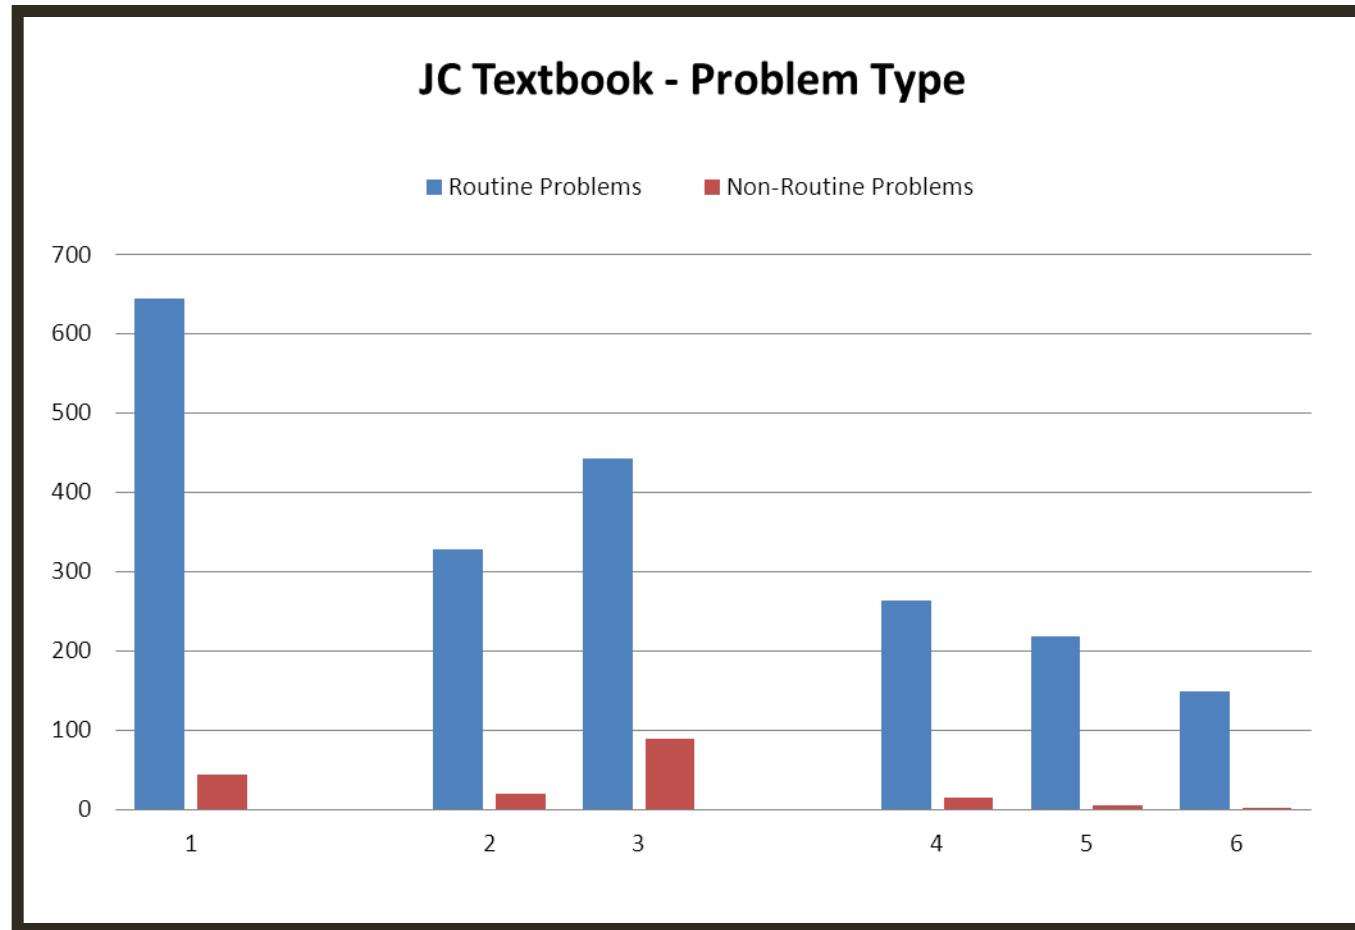

# Example of Main Findings

- ▶ Structure
- ▶ Content
- ▶ Expectation

# Content Analysis:

# Content Analysis:

# Expectation Analysis: Main Findings

SCC 2	Textbook 1	Textbook 2
Omissions when compared with PM syllabus:	<ul style="list-style-type: none"> <li>• Generalising (S3&amp;4)</li> <li>• Performing more complex procedures (S2&amp;4)</li> <li>• Formulating &amp; Clarifying Problems (S2&amp;4)</li> <li>• Developing Strategies (S2&amp;4)</li> <li>• Predicting (S4)</li> <li>• Developing Algorithms (S3)</li> </ul>	<ul style="list-style-type: none"> <li>• Generalising (S3&amp;4)</li> <li>• Recognising Equivalents (S2)</li> <li>• Developing Strategies (S2,3&amp;4)</li> <li>• Predicting (S1&amp;4)</li> </ul>
Absent from Strand 4	<ul style="list-style-type: none"> <li>• Conjecturing</li> <li>• Justifying &amp; Proving</li> <li>• Use of Vocabulary &amp; notations</li> <li>• Describing &amp; Discussing</li> </ul>	<ul style="list-style-type: none"> <li>• Conjecturing</li> <li>• Justifying &amp; Proving</li> <li>• Use of Vocabulary &amp; notations</li> <li>• Describing &amp; Discussing</li> </ul>
Syllabus key expectations: (under-represented)	<ul style="list-style-type: none"> <li>• Inquiry based Learning</li> <li>• Problem Solving in Context</li> <li>• Using Graphics to assist Problem Solving</li> </ul>	<ul style="list-style-type: none"> <li>• Inquiry based Learning</li> <li>• Problem Solving in Context</li> <li>• Using Graphics to assist Problem Solving</li> </ul>

# Report Conclusion:

Text-book	Structure	Content	Expectation
1	<ul style="list-style-type: none"> <li>• High narration</li> <li>• Low instructional narration</li> <li>• Key terms accentuated by printing devices</li> <li>• V. Large number graphics</li> <li>• Ex:Pr is 3:1</li> <li>• 2% of total are non-routine</li> <li>• Strand 4 – problems not integrated</li> </ul>	<ul style="list-style-type: none"> <li>• Gaps: ICT</li> <li>• Good consideration to motivational factors</li> </ul>	<ul style="list-style-type: none"> <li>• Lack of focus on mathematical thinking</li> <li>• Underrepresentation of Problem Solving in context</li> </ul>
2		<ul style="list-style-type: none"> <li>• Reasonably well aligned with PM</li> </ul>	<ul style="list-style-type: none"> <li>• Key Expectations Omitted in Strand 4</li> <li>• Problem Solving (S2 &amp; 4)</li> </ul>

# Key findings

- The summary of the key findings suggests that no one textbook met the needs of the new mathematics curriculum but there were some genuine attempts.
- While there were structural differences, as expected, across the disaggregated textbooks the mismatches with regard content and expectation are of primary concern.
- Content omissions such as
  - ‘Domain and Range’, ‘Linear Functions’ and ‘Proportionality Problems’
- Similarly key expectation omissions such as:
  - a focus on ‘Developing Algorithms’, ‘Performing more Complex Procedures’, ‘Formulating & Clarifying Problems’ and ‘Across and Inter Subject Connections’.
- Further to this a note in the expectations data indicates that a greater emphasis could be placed on ‘inquiry based learning’, ‘problem solving in context’ and the ‘use of graphics to assist with problem solving’.
- A further key finding was the noteworthy omissions of the integration of ICT throughout all textbooks and disparities between approaches to teaching for understanding and problem solving.

# Implications...

- The above findings indicate a mismatch between curriculum and textbook expectations.
- Ball & Cohen (1996) mismatch could obstruct a complete 'change' in approaches to teaching and learning
- The previous mathematics curriculum
  - providing predictable exams,
  - large chunks of the curriculum could be omitted entirely
  - students could rote learn some key information

(Oldham, 2001).

# Implications...

- Project Maths identifies itself as a **new mathematics curriculum** with a **new focus** aimed at improving the teaching and learning of mathematics and hence improving students' comprehension and understanding (Jeffes et al., 2012)
- Project Maths intends to counteract this with a change in teaching methodologies and a focus on teaching for understanding and application (Lynch, 2011).
  - fully informed on expectations and good practices
  - Textbook must echo the expectations of the curriculum (Ball & Cohen, 1996, Remillard, 2005)

# Implications for Teachers...

- NCCA identify that Irish mathematics teachers
  - focus entirely on routine procedures
  - place little or no value on the concepts of understanding, communicating, validating and justifying mathematics.
- This is reflected in the previous Irish textbooks (O’Keeffe, 2011) by the dominance of:
  - the expectation to perform routine procedures
  - minimised or omitted focus on predicting, verifying, justifying, critiquing and discussing mathematics.
- Ball & Cohen (1996) discuss the difficulties teachers face when asked to change practices, strategies and approaches to teaching
  - Such difficulties are increased in light of the findings of Ní Ríordáin & Hannigan (2009).

# Conclusion:

- Textbook analysis
  - provided an insight into how the focus and expectations of the new mathematics curriculum was developed in the supporting mathematics textbooks.
  - raised awareness among teachers about the differences between textbooks, the options available to them
  - the key features and expectations of Project Maths were discussed from a different perspective.
- This report reinforces a method of textbook analysis than enables direct comparison between mathematics curricula and textbooks
  - while explicitly identifying the impact that such can have on ensuring greater cohesion between the message of the curriculum and the message of the textbook.

Thank You Very Much.
