

## A historical perspective on mathematics textbooks

- Approaches to mathematics education change and evolve  
*e.g., Howson, 1982; Walmsley, 2007*
- Mathematics textbooks can provide a view of approaches of the past  
*Howson, 2013*
- Thus, mathematics textbooks can bring into sight historical roots of approaches of the present
- Which can lead to a better understanding of approaches in contemporary mathematics textbooks

## Mathematics textbook use in Dutch primary schools

- About 94 % of Dutch primary school teachers indicate that a textbook is the main source of their teaching and for about 62 % a textbook is the only source they use Meelissen et al., 2012; Scheltens et al., 2013
- At least 80 % of the teachers follow the textbook content for more than 90 % Hop, 2012
- Thus, mathematics textbooks are of decisive influence on the Dutch' enacted curriculum

## Primary school mathematics textbooks in the Netherlands

- There are currently 7 mathematics textbook series available on the market
- Most of these textbook series are more or less influenced by the Dutch 'Realistic Mathematics Education' (RME) approach
- On approximately 90-95% of the schools, a RME-based textbook series is being used

## Realistic Mathematics Education (RME)

- The Dutch RME reform dates from the 1970s (it became known as 'RME' since the 1980s)
- It was a reaction to
  - the then prevailing mechanistic approach in Dutch mathematics education
  - the international 'New Math' reform
- RME aims to give children a better basis for understanding mathematics
- Its name refers to '*zich realiseren*' (to imagine)

*e.g., De Jong, 1986; Van den Heuvel-Panhuizen, 2001*

## RME in Dutch mathematics textbooks

Some characteristics of RME that can be found in textbooks from the 1980s onward are:

- the use of context problems as a source for learning mathematics
- the use of models
- the use of different calculation methods
- the opportunity offered to children to come up with 'own productions', such as self-constructed problems

*De Jong, 1986; Van den Heuvel-Panhuizen, 2001*

## Aim of our study

Get a view of the development of RME-related characteristics in textbooks over the years

## Research question

Were RME characteristics present in a contemporary textbook series, already present in pre-RME textbook series, and if so in what way?

## Mathematical focus

Decimal numbers

## Decimal numbers in a mechanistic textbook (1978)

$$\begin{array}{r} 0,2 \\ 0,3 \times \\ \hline 0,06 \end{array}$$
  
← 1 cijfer achter de komma  
← 1 cijfer achter de komma  
← samen 2 cijfers achter de komma

$$\begin{array}{r} 0,07 \\ 0,4 \times \\ \hline 0,028 \end{array}$$
  
← 2 cijfers achter de komma  
← 1 cijfer achter de komma  
← samen 3 cijfers achter de komma

We tellen de cijfers achter de komma's.  
Zoveel cijfers komen in 't antwoord ook achter de komma.

1 digit behind the decimal point

Together two digits behind the decimal point

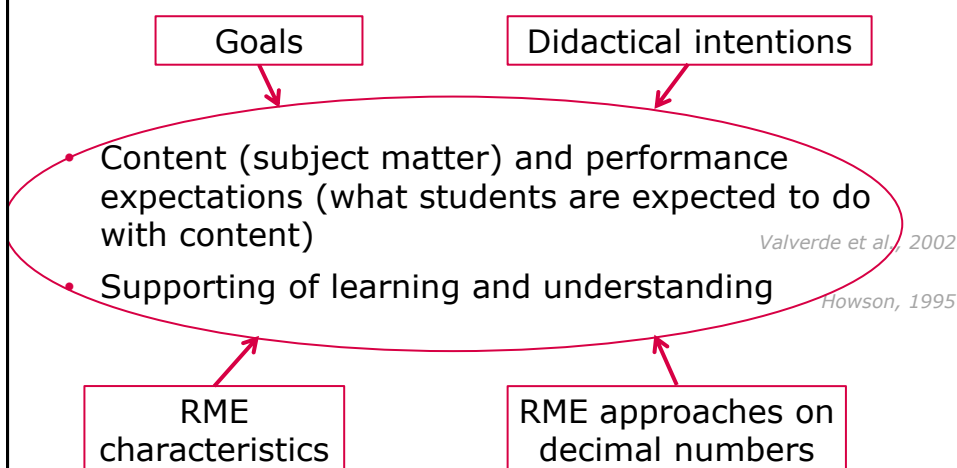

We count the digits behind the decimal points.  
The answer also gets that much digits behind the decimal points.

## RME approaches on decimal numbers

- Interpreting decimal numbers as measurement numbers
- Putting emphasis on estimation with decimal numbers
- Making use of models, especially the number line

*De Jong, 1986; Treffers, Streefland & De Moor, 1996*

## Method Development of analysis framework

Method    Analysis framework

Perspective	Specification of the perspective
Format of tasks	Tasks with bare numbers Tasks with measurement numbers Tasks with money
Type of calculation	Tasks on mental calculation Tasks on estimation Tasks on written calculation Tasks on using a calculator
Learning facilitators	Use of contexts as a source for learning Use of the number line as a model Use of other models Offering different calculation methods Offering the opportunity for 'own productions'

Method    Textbook series included in the analysis

## Method Textbook materials included in the analysis

- Materials for grades 4, 5 and 6
- All materials that are meant for all students and the corresponding directions in the teacher guidelines
- Optional exercises meant for evaluation, repetition or enrichment were left out of our analysis

## Method Unit of analysis

<b>Reken uit.</b>		
<b>a</b> In de voordeelbak liggen nog een paar coupons grastapijt. Stukken van 12,5 m en 3 m en 7,75 m. Hoeveel meter in totaal?	<b>b</b> $0,5 + 0,44 =$ $5,03 + 99 =$ $0,06 + 60,1 =$ $7,5 + 3,75 =$	<b>c</b> $2,55 + 35 + 102 =$ $60 + 4,89 + 3,01 =$ $5,49 + 3,21 + 130 =$ $12,4 + 0,45 + 3,05 =$

- A **task** is the smallest unit that requires an answer
- A task is often part of a **set of tasks**
- We considered **corresponding directions in the teacher guidelines** as belonging to the (sets of) tasks

## Method Analysis procedure

How is this possible?

1. Hoe kan dat?

$$2,5 \times 28 = (10 \times 28) : 4 = \dots \quad \text{of } 28 + 28 + 14 = \dots$$
$$\text{of } 2,5 \times 20 + 2,5 \times 8 = \dots \quad \text{of } 2,5 \times 30 - 2,5 \times 2 = \dots$$

2. Bereken op de eenvoudigste manier uit het hoofd:

$2,5 \times 84 =$	$2,5 \times 104 =$	$72 \times 2,5 =$	$48 \times 2,5 =$
$2,5 \times 42 =$	$2,5 \times 280 =$	$84 \times 2,5 =$	$56 \times 2,5 =$

Calculate by mental computation, and use the easiest way

- **Format of tasks:** Tasks with bare numbers (9 tasks)
- **Type of calculation:** Mental calculation (9 tasks)
- **Learning facilitators:** Offering different calculation methods (1 task)

## Results

- Exposure of decimal number tasks of different formats
- Measurement numbers and place value
- First exposure of bare decimal numbers
- Types of calculation with decimal numbers, especially estimation
- Use of the number line

## Tasks on place value with measurement numbers: **FA**

8,64 gld. De 8 = ....

8,64 l. De 8 = ....

35,89 m. Deze 35 = ....

35,89 kg. Deze 35 = ....

8,64 m. De 8 = ....

8,64 g. De 8 = ....

f 35,89 Deze 35 = ....

35,89 Deze 35 = ....

4286,753 m = 4.. + 2.. + 8.. + 6.. + 7.. + 5.. + 3..

465,93 l = 4.. + 6.. + 5.. + 9.. + 3..

74,9638 hm = 7.. + 4.. + 9.. + 6.. + 3.. + 8..

3,5794 kg = 3.. + 5.. + 7.. + 9.. + 4..

## Tasks on place value with measurement numbers: **NA**

gld	dubb	c
4	7	5

f 8,75 = 8 .. + 7 .. + 5 ..

f 10,36 = 10 .. + 3 .. + 6 ..

m	dm	cm
3	8	4

5,76 m = 5 .. + 7 .. + 6 ..

2,43 m = 2 .. + 4 .. + 3 ..

3,75 m = .. m + .. dm + .. cm

Doe ook zo met: 4,25 m =      9,13 m =      7,36 m =

7,86 m =      8,41 m =      4,75 m =

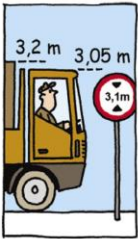

Tasks on place value with measurement numbers: **WiN**

Zet de kommagetallen in de positieschema's.

1.  $\frac{1}{2} = \frac{\cdot}{10}$      $\frac{1}{2} = \frac{\cdot}{100}$      $\frac{1}{2} = \frac{\cdot}{1000}$      $\frac{1}{20} = \frac{\cdot}{100}$      $\frac{1}{4} = \frac{\cdot}{100}$   
 $\frac{1}{5} = \frac{\cdot}{10}$      $\frac{1}{5} = \frac{\cdot}{100}$      $\frac{1}{5} = \frac{\cdot}{1000}$      $\frac{1}{50} = \frac{\cdot}{100}$      $\frac{1}{4} = \frac{\cdot}{1000}$   
 $\frac{2}{5} = \frac{\cdot}{10}$      $\frac{2}{5} = \frac{\cdot}{100}$      $\frac{2}{5} = \frac{\cdot}{1000}$      $\frac{3}{50} = \frac{\cdot}{100}$      $\frac{3}{4} = \frac{\cdot}{100}$   
 $\frac{3}{5} = \frac{\cdot}{10}$      $\frac{3}{5} = \frac{\cdot}{100}$      $\frac{3}{5} = \frac{\cdot}{1000}$      $\frac{7}{50} = \frac{\cdot}{100}$      $\frac{3}{4} = \frac{\cdot}{1000}$

2.  $\frac{1}{25} = \frac{\cdot}{100}$      $\frac{1}{8} = \frac{\cdot}{1000}$      $\frac{1}{5} = \frac{\cdot}{100}$      $\frac{1}{25} = \frac{\cdot}{1000}$      $\frac{4}{25} = \frac{\cdot}{1000}$   
 $\frac{3}{25} = \frac{\cdot}{100}$      $\frac{3}{8} = \frac{\cdot}{1000}$      $\frac{1}{50} = \frac{\cdot}{100}$      $\frac{7}{25} = \frac{\cdot}{1000}$      $\frac{1}{125} = \frac{\cdot}{1000}$   
 $\frac{7}{25} = \frac{\cdot}{100}$      $\frac{5}{8} = \frac{\cdot}{1000}$      $\frac{1}{5} = \frac{\cdot}{1000}$      $\frac{1}{200} = \frac{\cdot}{1000}$      $\frac{3}{125} = \frac{\cdot}{1000}$   
 $\frac{14}{25} = \frac{\cdot}{100}$      $\frac{7}{8} = \frac{\cdot}{1000}$

3. Schrijf als tiendelige breuken:  
 $\frac{1}{10} = 0,1$      $\frac{1}{100} = 0,01$      $\frac{1}{1000} = 0,001$      $\frac{4}{10} = \frac{\cdot}{\cdot}$      $\frac{4}{1000} = \frac{\cdot}{\cdot}$   
 $\frac{3}{10} = \frac{\cdot}{\cdot}$      $\frac{9}{100} = \frac{\cdot}{\cdot}$      $\frac{8}{1000} = \frac{\cdot}{\cdot}$      $\frac{7}{100} = \frac{\cdot}{\cdot}$      $\frac{8}{100} = \frac{\cdot}{\cdot}$   
 $\frac{7}{10} = \frac{\cdot}{\cdot}$      $\frac{4}{100} = \frac{\cdot}{\cdot}$      $\frac{2}{1000} = \frac{\cdot}{\cdot}$      $\frac{9}{1000} = \frac{\cdot}{\cdot}$      $\frac{8}{10} = \frac{\cdot}{\cdot}$   
 $\frac{9}{10} = \frac{\cdot}{\cdot}$      $\frac{8}{100} = \frac{\cdot}{\cdot}$      $\frac{8}{1000} = \frac{\cdot}{\cdot}$      $\frac{5}{1000} = \frac{\cdot}{\cdot}$      $\frac{8}{1000} = \frac{\cdot}{\cdot}$

Write down as decimal numbers

First exposure of bare decimal numbers:  
**NA**

1. Een honderdste deel van 100 c = ... c.  
 $\frac{1}{100} \times 1 \text{ gld} = \dots \text{ c}$        $1 \text{ gld} : 100 = \dots \text{ c}$        $\frac{1 \text{ gld}}{100} = \frac{100 \text{ c}}{100} = \dots$

2. a.  $\frac{1}{100} \times 500 \text{ c} = \dots$       b.  $\frac{1}{100} \times 1 \text{ gld} = \dots \text{ c}$       c.  $\frac{1}{100} \times 1 \text{ m} = 1 \dots$   
 $\frac{1}{100} \times 700 \text{ c} = \dots$        $\frac{1}{100} \times 7 \text{ gld} = \dots \text{ c}$        $\frac{1}{100} \times 1 \text{ l} = 1 \dots$

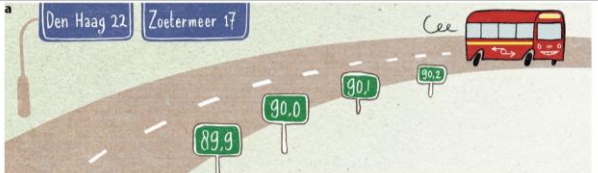

3. a.  $1 \text{ c} = \frac{1}{100} \text{ gld}$       b.  $3 \text{ c} = \frac{3}{100} \text{ gld}$       c.  $27 \text{ c} = \frac{27}{100} \text{ gld}$

4. a.  $1 \text{ m} = \dots \text{ hm}$       b.  $1 \text{ g} = \dots \text{ hg}$       c.  $1 \text{ l} = \dots \text{ hl}$       d.  $\frac{1}{100} \text{ hm} = \dots \text{ hm}$   
 $12 \text{ m} = \dots \text{ hm}$        $17 \text{ g} = \dots \text{ hg}$        $6 \text{ l} = \dots \text{ hl}$        $\frac{1}{100} \text{ hg} = \dots \text{ hg}$

5. a. In plaats van  $\frac{31}{100}$  schrijft men meestal 0,31, en voor  $\frac{1}{100}$  schrijft men meestal 0,01.  
b.  $\frac{31}{100} \text{ gld} = \dots \text{ gld}$       c.  $75 \text{ c} = \frac{75}{100} \text{ gld} = f 0,75$       d.  $0,03 = \frac{\dots}{100}$   
 $\frac{36}{100} \text{ gld} = \dots \text{ gld}$        $53 \text{ c} = \dots \text{ gld} = f \dots$        $0,75 = \frac{\dots}{100}$

Instead of  $\frac{31}{100}$  one usually writes 0.31.  
And for  $\frac{1}{100}$  one usually writes 0.01.

First exposure of bare decimal numbers:  
**WiN**

## Types of calculation

	<b>FA</b>		<b>NA</b>		<b>WiN</b>	
Mental arithmetic	474	36%	346	24%	321	32%
Estimation	188	14%	472	32%	367	36%
Written arithmetic	671	50%	651	44%	238	24%
Using a calculator					81	8%
	1333	100%	1469	100%	1007	100%

## Estimation

	<b>FA</b>		<b>NA</b>		<b>WiN</b>	
Estimation in order to check precise calculation	173	92%	310	66%	112	31%
Estimation as a task on its own	15	8%	162	34%	255	69%
	188	100%	472	100%	367	100%

## Estimation: **FA**

Is more than ..., but less than ...

1,8 is meer dan .., maar minder dan ..

Is larger than ... and smaller than ...  
Fill in whole numbers

De uitkomst van  $2,4 \times 7,6$  is groter dan .. en kleiner dan ..  
Gehele getallen invullen.

## Estimation: **FA**

Write down, or leave blank, without actually calculating: 'wrong', 'too big', 'too small'

Schrijf achter de volgende sommetjes „fout” en „te groot” of „te klein”, als je direct ziet, dat de uitkomst fout is. Niet eerst zelf uitrekenen! Als je meent, dat het antwoord goed kàn zijn, dan zet je er niets achter.

$$0,95 \times 2,357 = 22,3915$$

$$40,434 : 8,79 = 4,6$$

$$4,82 \times 25,94 = 125,0308$$

$$1,7472 : 364 = 48$$

$$5,267 \times 40,3 = 21,22601$$

$$17,328 : 4,56 = 38.$$

## Estimation: **NA**

Do you see it?  $5 \times f 4.25$  is less than  $f 25$  but more than  $f 20$

$f 3,87$  is meer dan  $f 3$

$f 3,87$  is minder dan  $f 4$

Zie jij dat ook?  $5 \times f 4,25$  is minder dan  $f 25$ , maar meer dan  $f 20$ .

Doe ook zo met:

$$6 \times f 8,67$$

$$3 \times f 3,57$$

$$10 \times f 2,75$$

$$6 \times f 6,59$$

$$9 \times f 4,38$$

Waarom zal de uitkomst van  $36 \times f 0,45$  minder zijn dan  $f 36$ ?

Why is the answer to  $36 \times f 0.45$  less than  $f 36$ ?

## Estimation: **NA**

about

almost

$$190,65 : 31 \rightarrow \text{ongeveer } 6$$

$$679,2 : 14 - \text{bijna } 50$$

$$145,48 : 12 \rightarrow \text{ruim } 12$$

Doe ook zo met:

$$180,75 : 25 =$$

$$51,84 : 16 =$$

$$47,88 : 28 =$$

$$112,8 : 12 =$$

$$603,75 : 35 =$$

$$598,56 : 48 =$$

over

Estimation: **WiN**

**Schat het antwoord.**

$4 \times \text{€ } 19,85 \approx \text{€ } \dots$

$3 \times \text{€ } 24,95 \approx \text{€ } \dots$

Estimate the answer

What is the correct answer?  
How do you calculate?

Wat is het goede antwoord? Hoe reken je?

	450		22,5
$30 \times 0,15 =$	4,5	$500 \times 0,45 =$	0,225
	0,45		225

Estimation: **WiN**

Bram has made some mistakes with his calculator. What wrong decimal numbers did he enter?

Bram heeft een paar kommafouten gemaakt met de rekenmachine.  
Welke foute getallen toetste hij in?

som:	goed of fout?	Bram toetste in:	som:	goed of fout?	Bram toetste in:
$24,75 + 37,2 = 396,75$			$16 \times 3,25 = 52$		
$265,2 + 0,16 = 281,2$			$8,5 \times 16 = 136$		
$34,75 + 18,85 = 53,6$			$0,125 \times 120 = 0,015$		

Schatten. Tussse welke komagetallen ligt het antwoord?

Estimate

$205 : 15 =$	13,0 en 13,5	$880 : 60 =$	14,0 en 14,5
	13,5 en 14,0		14,5 en 15,0

Sets of tasks that offer the number line

	FA	NA	WiN
Ordering and positioning decimal numbers on the number line	0	2	10
Connecting decimal numbers to equivalent fractions and vice versa	0	0	9
Zooming in	0	0	2
Supporting calculations	0	3	1
	0	5	22

Use of the number line: **NA**

Vul de ontbrekende getallen in:

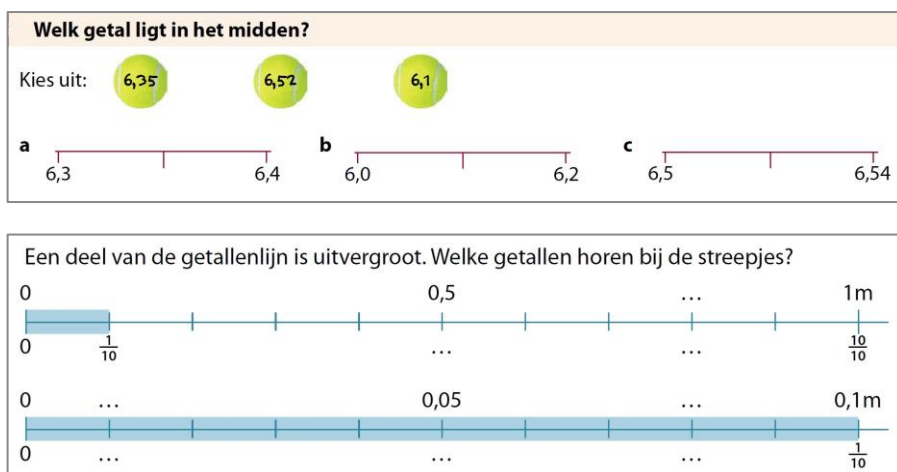

Welke som is dit?

## Use of the number line: **WiN**

## Use of the number line: **WiN**

## Conclusions

- Onsets of RME-characteristics present in **WiN** were already present in **FA** and **NA**
- The degree of (onsets on) RME-characteristics in **WiN** is greater than in **FA** and **NA**
- In some cases the onsets of RME-characteristics in **FA** and **NA** differ considerably from the RM-characteristics in **WiN**
- In some cases they are quite similar or even show a certain evolvement

*The RME-reform was built at least in part on approaches that were in potency already present in textbooks of the 1960s and 1970s.*

## What have we learned? (among other things)

Regarding *method*:

One **unit of analysis** is not sufficient. The perspectives content, performance expectations and learning facilitators require different units of analysis

Estimate

<b>Schatten.</b> (Ongeveer, bijna, ruim) Voorbeelden: $4 \times f 5,87$ bijna $f 24$ $4 \times f 5,87 =$ $8 \times f 0,24 =$ $3 \times f 2,06 =$ $6 \times f 1,45 =$ $9 \times f 3,27 =$ $7 \times f 1,30 =$		<table> <tr> <td>5,8</td> <td>6,3</td> </tr> <tr> <td><math>\times 7</math></td> <td><math>\times 9</math></td> </tr> <tr> <td><hr/></td> <td><hr/></td> </tr> <tr> <td>9,1</td> <td>8,2</td> </tr> <tr> <td><math>\times 2</math></td> <td><math>\times 6</math></td> </tr> <tr> <td><hr/></td> <td><hr/></td> </tr> </table>	5,8	6,3	$\times 7$	$\times 9$	<hr/>	<hr/>	9,1	8,2	$\times 2$	$\times 6$	<hr/>	<hr/>
5,8	6,3													
$\times 7$	$\times 9$													
<hr/>	<hr/>													
9,1	8,2													
$\times 2$	$\times 6$													
<hr/>	<hr/>													

Teacher guidelines: Estimate, before precise calculation

### What have we learned? (among other things)

Regarding *results*:  
in the analyzed pre-RME textbook series, we found examples of types of tasks that might form a worthwhile addition to contemporary Dutch textbooks

Is larger than ... and smaller than ...  
Fill in whole numbers

De uitkomst van  $2,4 \times 7,6$  is groter dan .. en kleiner dan ..  
Gehele getallen invullen.

### What have we learned? (among other things)

$$\begin{array}{r} 5,6 \\ \times 9,2 \\ \hline 112 \\ 5040 \\ \hline 515,2 \end{array}$$

Someone had to calculate  $9.2 \times 5.6$ .  
What mistake did he make?  
What is the actual answer?  
How big is the difference between the answer alongside and the actual answer?

Bram heeft een paar kommafouten gemaakt.  
Welke foute getallen toetste hij in?

som:	goed of fout?	Bram toetste in:	som:	fout?	toetste in:
$24,75 + 37,2 = 396,75$			$16 \times 3,25 = 52$		
$265,2 + 0,16 = 281,2$			$8,5 \times 16 = 136$		
$34,75 + 18,85 = 53,6$			$0,125 \times 120 = 0,015$		

Bram has made some mistakes with his calculator. What wrong decimal numbers did he enter?

**Thank you**
