

Notes:

1. Team Name:

- Orion

2. General Ideas:

- Crowdsourcing- some kind of concept design that allows users to share and collaborate about learning and resources.
- Lost and Found- Some kind of concept design that allows users to flag and identify, by local area or nationwide, different things that have been lost and found.
 - Game based design for an application. What form should it take and why? Consideration that there are a lot of other alternative similarities out in the market and it needs to be unique.
 - Should it be entrepreneurial or philanthropic?
 - Should it reflect the interests of the group members planning the project, as it should be something that they are engaged by?
 - If it is going to be pitched by dragons den, should it be about primarily making money and organising a project around this to secure investment.

3. Next Meeting:

- a. Thursday, 20th February 2014- 13:00. Building 6 Foyer (Assuming that room is free, or meet there and relocate).
- b. Place on the Facebook Group any ideas that can be used for application design.
